PROBLEM SET #4

Due Tuesday, September 27

(Problems are from *Vector Calculus* by Marsden and Tromba, sixth edition.)

1

Find a parametrization of the surface  $z = 3x^2 + 8xy$  and use it to find the tangent plane at x = 1, y = 0, z = 3.

 $\mathbf{2}$ 

Let  $D = [0,1] \times [0,\pi]$  and define  $\vec{\Phi}(x,y,z) : D \to \mathbb{R}^3$  by  $(u,v) \mapsto (e^u \cos v, e^u \sin v, v)$ . Denote the image of  $\vec{\Phi}$  by S.

- (a) Find  $\vec{T}_u \times \vec{T}_v$ .
- (b) Find the equation for the tangent plane to S at  $\vec{\Phi}(0, \frac{\pi}{2})$ .
- (c) Find the area of S. Hint: You'll probably need to use the following fact:

$$\int \sqrt{u^2 + 1} \, du = \frac{u}{2} \sqrt{u^2 + 1} + \frac{1}{2} \log \left| u + \sqrt{u^2 + 1} \right| + c.$$

3

Let D be the unit disk in  $\mathbb{R}^2$  and define  $\vec{\Phi}: D \to \mathbb{R}^3$  by  $(u, v) \mapsto (u - v, u + v, uv)$ . Find the area of  $\vec{\Phi}(D)$ .
